Program to Demonstrate Colors and Fonts Using JFrame

Steps to Perform

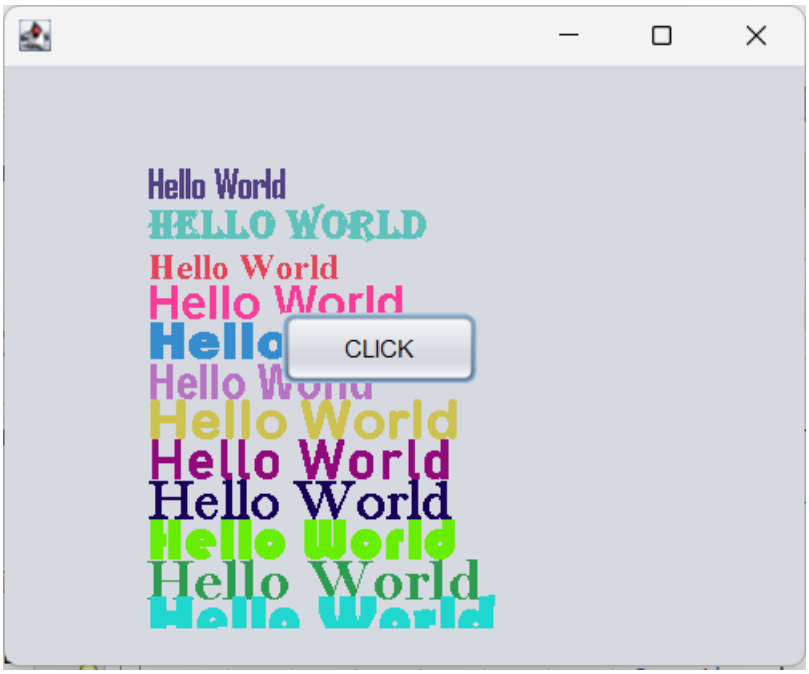
1. Open NetBeans and create a New Java Application.
2. Right-click on the project → New → JFrame Form.
3. Enter the class name as NewJFrame.
4. Drag and drop a JPanel onto the JFrame.
5. Drag and drop a JButton onto the JPanel.
6. Right-click on JButton → Edit Text → Set the button text as CLICK.
7. Right-click on JButton → Events → Action → actionPerformed.
8. Add the following import statements at the top of the source code:

```
import java.awt.*;

import java.awt.geom.*;

import java.util.*;
```

9. Write the given code inside the jButton1ActionPerformed() method to display Hello World in different fonts and random colors.
10. Save the program using Ctrl + S.
11. Right-click inside the code → Run File.
12. Click the CLICK button to display Hello World in different font styles and colors.

Result


Successfully demonstrated different font styles, font sizes, and random colors using Java Swing JFrame.
